

Forest Service U.S. DEPARTMENT OF AGRICULTURE

## 'Living Maps' for Wildlife

Landscapes are changing rapidly – and wildlife maps need to be able change rapidly too

'Living maps' allow managers to plan projects and respond to management needs using the most upto-date information possible

A
6 9

Living maps use real-time automated tools based on global satellite imagery combined with animal locations to produce cutting edge, rapidly updatable, and highly accurate species habitat models and long-term habitat trends
