

Forest Service
U.S. DEPARTMENT OF AGRICULTURE

Wildlife Ecology Program

of the Rocky Mountain Research Station

Providing conservation solutions for the maintenance, sustainability, and resilience of the nation's wildlife, fish, and their habitats through creative, cutting-edge science.

- **>50 staff and scientists based in six locations**

- Albuquerque, NM
- Boise, ID
- Bozeman, MT
- Flagstaff, AZ
- Fort Collins, CO
- Missoula, MT

- **The home of two research centers**

- The National Genomics Center for Wildlife and Fish Conservation
- The Biodiversity Research and Policy Center

- **Hundreds of collaborations**

- State and federal agencies, tribes, universities, NGOs, and the private sector

- **Seven research focal areas**

- Fire, insects, restoration, and vegetation management
- Invasive species
- Conservation genomics
- Species and habitats of concern
- Inventory, monitoring, and decision-support tools
- Human-wildlife interactions
- Wildlife disease
